

PRIYANKA BOMMANAHALLI RAGHUNATH

Cloud Operations & Infrastructure Engineer • AWS Certified Solutions Architect – Associate

Toronto, ON | +1 (437) 566-6958 | priyaraghunath24@gmail.com | [linkedin.com/in/priyanka-b-raghunath](https://www.linkedin.com/in/priyanka-b-raghunath) | [Portfolio](#)

PROFESSIONAL SUMMARY

Cloud Operations and Infrastructure Engineer with 3+ years of hands-on AWS experience across production, hybrid and multi-cloud environments. Provisions and administers cloud infrastructure using Terraform and Ansible; designs and maintains CI/CD pipelines; supports workload migrations; and troubleshoots production issues across AWS and Kubernetes, including major incident response. Experienced in cloud governance and compliance, cost optimisation, observability and disaster recovery, with additional hands-on Azure, Active Directory and on-premises infrastructure administration.

TECHNICAL SKILLS

AWS: EC2, S3, VPC, RDS, EBS, ECR, Lambda, Route 53, CloudFront, Auto Scaling Groups, Systems Manager, AMI, CloudTrail, AWS Backup, Migration Hub, Server Migration Service

Microsoft Azure: Virtual Machines, Blob Storage, Azure SQL Database

Infrastructure as Code & Automation: Terraform, Ansible, AWS CloudFormation, Python, Bash, YAML, HCL, Groovy

CI/CD & Version Control: AWS CodePipeline, CodeBuild, CodeDeploy, CodeCommit, Jenkins, GitHub Actions, Git, GitHub, Maven

Containers & Orchestration: Docker, Kubernetes, Amazon EKS, Amazon ECS Fargate, Helm

Monitoring & Reliability: Amazon CloudWatch, Prometheus, Grafana, NinjaOne, distributed tracing, SLO/SLI/SLA definition, disaster recovery, cross-region replication

Security & Identity: AWS IAM roles and policies, security groups, least-privilege access, Active Directory, Microsoft 365 Admin Center, Microsoft Intune, FortiGate VPN, Kubernetes Secrets and ConfigMaps

Platforms & Practices: Linux, Windows, SQL, MySQL, PostgreSQL, Agile, Jira, Confluence

PROFESSIONAL EXPERIENCE

Cloud Support DevOps Engineer — Toronto Regional Real Estate Board

Apr 2026 – Present

Toronto, ON • Multi-cloud and on-premises infrastructure operations

- Manage and support multi-cloud infrastructure across AWS and on-premises environments, ensuring reliability, availability and compliance, and maintain cloud governance policies, operational procedures and compliance documentation.
- Lead cloud migration initiatives including workload migration from Amazon EC2 to Amazon ECS Fargate, applying cloud expertise to minimise risk and downtime while improving scalability and business continuity across production workloads.
- Provide subject matter expertise on AWS services supporting reliability and business recovery objectives, and troubleshoot infrastructure issues during major incidents using CloudWatch, NinjaOne, provider consoles and CLI tools.
- Drive cloud cost optimisation by analysing usage and capacity requirements, right-sizing compute resources and applying Auto Scaling policies to eliminate unnecessary spend across AWS accounts and workloads.
- Design, deploy and maintain cloud solutions using AWS CodeCommit, CodeBuild, CodeDeploy and CodePipeline, applying DevOps best practices to CI/CD pipeline design and automated cloud infrastructure deployment.
- Administer Active Directory, Microsoft 365 and Intune device compliance, configure FortiGate VPN connectivity and manage access permissions and security controls, collaborating with vendors and cross-functional stakeholders.

Cloud Engineer — DHL Global Forwarding

Nov 2024 – Mar 2025

Global freight forwarding and logistics • AWS, Azure and Kubernetes

- Provisioned and managed AWS infrastructure across EC2, S3, RDS, VPC and IAM using Terraform, ensuring repeatable, scalable and cost-efficient resource management across development and production environments.
- Migrated legacy applications to AWS using AWS Migration Hub and Server Migration Service, and reduced infrastructure spend through S3 Lifecycle Policies, EC2 Spot Instances and right-sized compute selection.

- Deployed and maintained Azure resources including Virtual Machines, Blob Storage and Azure SQL Database, supporting application scalability and high availability across business-critical workloads.
- Automated build, test and deployment of Java microservices by integrating Git with AWS CodePipeline, CodeBuild and Jenkins; built with Maven, deployed to Amazon EC2 and EKS via Ansible, and managed releases with Docker and Helm.
- Implemented monitoring, logging and distributed tracing across AWS and Kubernetes; built Grafana dashboards and Prometheus alerts, and led documentation and enablement workshops that drove observability adoption across teams.

Cloud Software Engineer — Daimler Truck Innovation Center
Dec 2022 – Aug 2023

Production AWS operations, reliability and disaster recovery

- Supported production AWS environments spanning EC2, S3, VPC, IAM, RDS, Route 53, ECR, EBS, CloudFront, Lambda and EKS, ensuring high availability, reliability and robust disaster recovery mechanisms.
- Troubleshoot application errors, latency and connectivity problems across microservices and infrastructure using AWS CLI alongside CloudWatch logs, metrics, dashboards and Grafana visualisations.
- Maintained consistent, repeatable environments across development, staging and production using AWS CloudFormation, enabling faster and more reliable application deployments across releases.
- Defined and maintained Service Level Objectives, Indicators and Agreements aligned to business goals, and developed AWS Lambda functions and Docker containers on Amazon EKS to automate backend workflows.

Software Engineer – Cloud — Capgemini
May 2021 – Dec 2022

AWS monitoring, identity, compliance auditing and business continuity

- Managed and monitored AWS resources using CloudWatch and CloudTrail for performance optimisation, proactive issue detection and auditing to support compliance and security requirements.
- Implemented granular IAM roles, policies and security groups to enforce least-privilege access and strengthen security posture across AWS resources and accounts.
- Delivered backup and disaster recovery using AWS Backup and cross-region replication, supporting business continuity and rapid recovery during critical incidents.
- Built CI/CD pipelines using GitHub Actions and AWS CodePipeline, and developed Python and Bash automation to streamline deployments and reduce manual intervention.

System Engineer — IBM
Nov 2018 – Apr 2021

Vendor management and procurement operations

- Managed end-to-end procurement with global vendors, covering onboarding, purchase order creation, contract compliance, invoice reconciliation and adherence to procurement policies and SLAs.
- Monitored supplier performance and supported spend analysis, process optimisation and management reporting using enterprise procurement systems and MS Excel.

EDUCATION

Post Graduate Certificate, Research Analyst — Humber Polytechnic, Toronto, ON	May 2024 – Apr 2025
Post Graduate Certificate, Project Management — Humber Polytechnic, Toronto, ON	Sep 2023 – Apr 2024
Bachelor of Engineering — Visvesvaraya Technological University	Aug 2014 – Jun 2018

CERTIFICATIONS

AWS Certified Solutions Architect – Associate	Verify credential
AWS Certified Cloud Practitioner	Verify credential
HashiCorp Certified: Terraform Associate	Verify credential
Microsoft Certified: Azure Fundamentals	Verify credential
